

# FQHC VBC Incentive Program

The Yuvo Health payments model brings a reliable payment stream for health centers that starts on day one, alongside performance-based incentives.

These quarterly payments bring your health center fair payments for the work you've conducted spanning quality, patient access, technology adoption, and engagement in meetings. You'll increase performance and quality of care, while getting paid to do so in a timely and fair manner.

## Understanding the performance metrics

### Quality

Quality performance is measured by the percentage of quality care gaps closed, as defined in your contracts through Yuvo Health.

### Patient access

Patient access performance is measured by appointments that fall under these two categories:

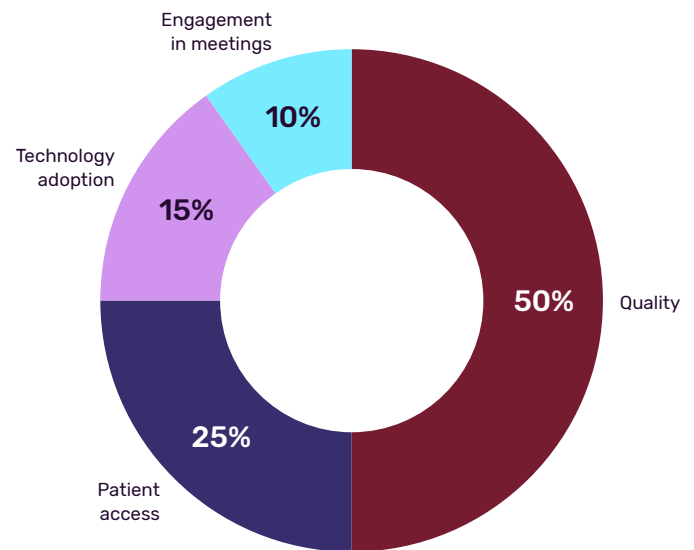

- Percentage of appointments that are the same day
- Four hours per week of after-hours appointments, including weekends

### Technology adoption

Performance in technology adoption is measured by your health center's utilization of Yuvo Health's Vim Connect system. Vim is a point-of-care engagement and connectivity platform that connects important data to your existing EHR workflows.

### Engagement in meetings

Performance here is measured via percentage of attendance by key FQHC stakeholders and staff members in the monthly performance meetings with the Yuvo Health team, whether in person or virtual.

Percent allocation of performance metrics
